RE: Miscellaneous Questions for the JPL Public Health Assessment

Environmental and
Occupational Health
Services

Dear Chuck,

Software Applications
Development

As we discussed yesterday on the phone, I am hoping to fill in a few holes in the information I have for OU 2:

Pollution Prevention

1. I need to know, with as much detail as is practical, the cover types (e.g., pavement, building, grass, flower bed, some combination of these, etc.) over the following potential source locations: Seepage Pits 5, 10-12, 14-19, 26, 30-32, and 34. If you have a list of cover types for all the suspected source areas, that would be ideal.

Technology Evaluation

Environmental
Sampling and Analysis

2. One of the maps you provided (Map 4-1 (Revised): Locations of Known Seepage Pits, etc.) shows a Seepage Pit 27 located in front of Building 246. Seepage Pit 27 is not listed on the "Cross Reference for Potential Source Locations and Exploratory Methods." Is this a mistake, and if so, can you provide the numbers of any soil probes, soil borings, or soil vapor wells associated with this site?

Technical Writing and
Editing

Meeting Management
and Facilitation

3. The cross reference table lists monitoring wells 12-16 as "Source-Point Designations." Were these wells placed at the site of suspected source areas, or are they suspected sources themselves? I believe you indicated that these wells should not be on the potential source location list at all, but I want to confirm this. If they are not suspected source areas I will omit them from our list.
